

ETOS — one-pager

From visibility to collaboration

ETOS makes visible the tensions between what systems promise, do, create and leave behind — so responsibility, reflection and learning become possible.

What ETOS is A reflective analysis and learning framework for systems in which intention, action, effect and lived reality do not always align.	Where it can be used Governance, psychiatry, municipal administration, democracy, AI systems, quality work, evaluation and pilot projects.	Next step ETOS is open to dialogue, pilot tracks, talks, articles, research collaboration and international contact.
